

Builder's Option: Coaming can be offset inwards and extended aft as shown for a permanent backrest (seating both sides)

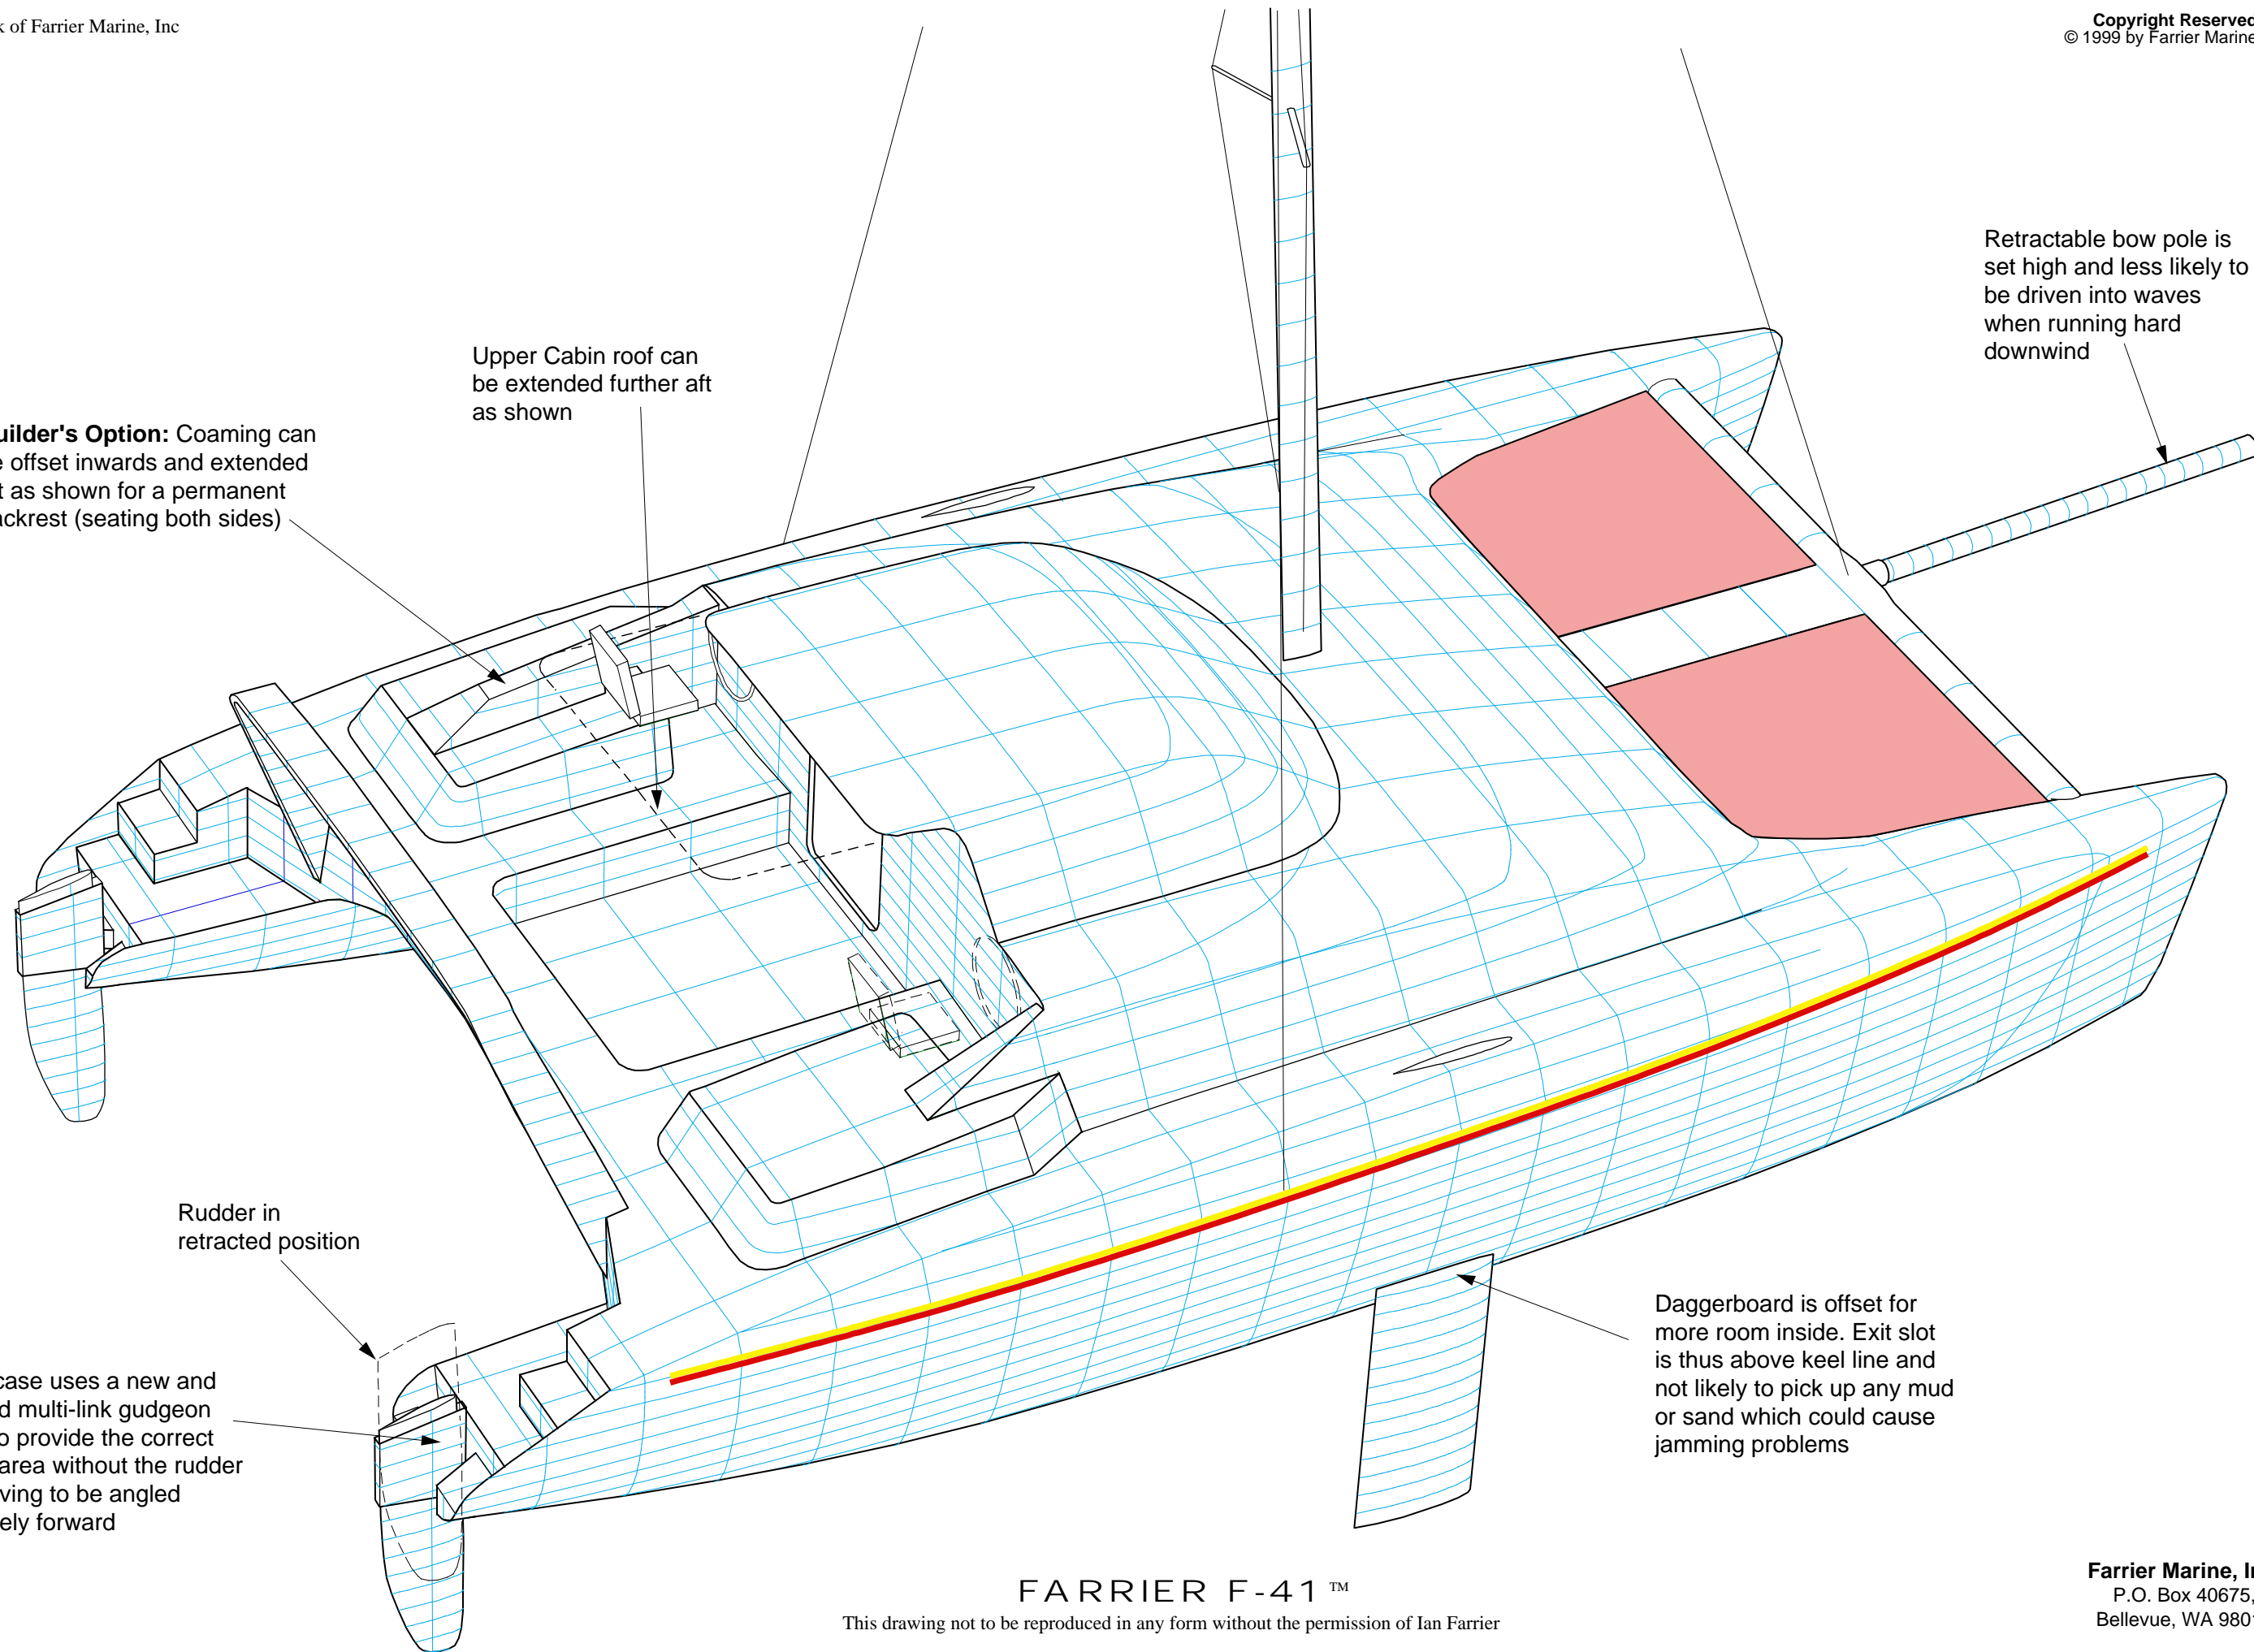

Upper Cabin roof can be extended further aft as shown

Retractable bow pole is set high and less likely to be driven into waves when running hard downwind

Rudder in retracted position

Rudder case uses a new and advanced multi-link gudgeon system to provide the correct balance area without the rudder blade having to be angled excessively forward

Daggerboard is offset for more room inside. Exit slot is thus above keel line and not likely to pick up any mud or sand which could cause jamming problems
